Level I "Authorized Person" Training

"Authorized Person" – An individual who has the approval of their employer to perform duties at a location where they will be exposed to high angle fall hazards. (ANSI Fall Protection Code Definition 2.11)

Only Takes 9 Lbs of Lateral Pressure to Move A Ladder Occupied by a 200 Lb Person Leaning Against An Aluminum Gutter

A Bold New Approach To Roof Specific Ladder Access Skills Training:

The Problem:

- 50+ % of all roof access incidents, injuries and fatalities are ladder use related.
- There is no such thing as a "Roof Specific" ladder. All ladders are "Multi-Purposed".
- Most people are deceived by the physical complexities of such a simple looking tool.

Our Solution Is Unmatched And Long Overdue:

- Hands-On roof specific ladder access training that transitions the classroom experience to the realities of the field.
- Use of OSHA & ANSI approved accessories that will increase the stability of the roof specific ladder access point **TEN TIMES** that of an unassisted ladder.

If you are able to complete JUST this portion of our class you have the power to effectively reduce your threat for a fall related injury by 50%

Roof Access Specific "First Man Up" Fall Protection Systems Training:

The Problem:

- "First Man Up" roof access systems **DO NOT EXIST** at any of the world's leading Fall Protection Training Companies. All standard roofing fall protection systems consist of either a safety net, a guardrail or a sacrificial lamb to free climb up to the roof top and nail in an anchor--Not practical fall protection solutions for most Roof Access workers.

Our Solution:

- Rope placement systems that allow the solo worker to construct a 5000 lb lifeline over any roof system, without the threat of damaging roof or equipment and all completed from the safety of solid ground.

If you are able to build a Lifeline / Handline over any roof from ground level your threat for a fall related injury can be reduced by an additional 30%

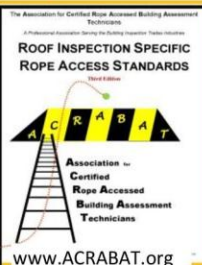

Rope Access Training Designed For The Roof Access Trades Community:

The Problem:

- Most Roof Access workers carry a rope for use as an access tool but very few in fact have completed any formalized rope access training.

Our Solution:

- Real Certification Training Based On **ACRABAT** Association Backed Standards that are updated annually to be current with worldwide Rope Access community practice.
- Experiential "Hands-On" education at unmatched reality based training center.
- Competent Instructors with decades of Rope Access program delivery experience.
- Written AND skills based testing on all training material to guarantee curriculum comprehension.

Those who successfully complete our "Authorized Person" training class are capable of all but eliminating any threat from a roof access related fall

Level II "Competent Person" Training

Competent Person – an individual designated by the employer to be responsible for the immediate supervision, implementation and monitoring of the employer's managed fall protection program who, through training and knowledge, is capable of identifying, evaluating, and addressing existing and potential fall hazards, and who has the employer's authority to take prompt corrective action with regards to such hazards. (ANSI Fall Protection Code Definition 2.30)

Competent In-House Rope Access Program Representative Training:

The Problem:

- Most companies who employ Roof Access workers have not implemented any plan for managing the height risk of their human workforce.

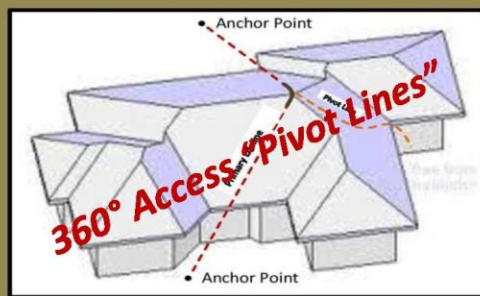

Our Solution to this problem is another unique training program designed to educate your in-house management level representative to:

- Develop and implement company specific managed fall protection plans.
- Evaluate skills and provide on-site training of Rope Access inspection teams.
- Provide for worker supervision and field support.
- Complete annual fall protection equipment inspections...

Adding a "Competent Person" to your company profile will produce instant and lasting results to the safety of your workforce and the quality of your products.

29 U.S.C. § 654, 5(a)1: Each employer shall furnish to each of his employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees."

\$1926.502 Fall protection systems criteria and practices.

 (d) Personal fall arrest systems.

 (20) The employer shall provide for prompt rescue of employees in the event of a fall or shall assure that employees are able to rescue themselves.
